Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at VisualExams and update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to <http://www.visualexams.com/>
2. Log in the **User Center**
3. The latest versions of all purchased products are downloadable from here. Just click the links.

Feedback

If you spot a possible improvement then please let us know. We always interested in improving product quality.

Feedback should be send to Visualexams@hotmail.com. You should include the following: Exam number, version, page number, question number, and your login Account.

Our experts will answer your mail promptly.

Explanations

This product does not include explanations at the moment. If you are interested in providing explanations for this exam, please contact Visualexams@hotmail.com.

Features

- Comprehensive questions with complete details
- Instant Downloadable in PDF form.
- Verified Answers Researched by Industry Experts
- Questions accompanied by exhibits.
- Drag and Drop questions as experienced in the Actual Exams.
- These questions and answers are backed by our GUARANTEE.
- Questions updated on regular basis.
- Like actual certification exams our product is in multiple-choice questions (MCQs)

Commitment to Your Success: At VisualTestExam.com, we are committed to you ongoing success. Our exams and questions are constantly being updated and compared to industry standards.

Want to earn a Microsoft certification like [MCSE](#), [MCSE 2003](#), [CCNA](#), [CCNP](#)? Thinking about getting an [A+](#) or [CCSP](#)?

A, [CCSP](#) or [Network+](#) Certification with less effort and time. You will be astonished at the theoretical and practical knowledge you will acquire in such a short period of time using our Certification Training Products. Our Study material will enable you to pass your [Microsoft](#), Your [Cisco](#) and any other certification on the very first attempt.

Guarantee

Visualexams provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if somehow you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

1. Using Page Designer, a developer can cause an event to occur upon a button click on a JSP by associating an:

- A. onClick event with the button on the Design page.
- B. onClick event with the button on the Source page.
- C. onChange event with the button on the Preview page.
- D. onChange event with the button on the Design page.

Answer: A

2. A developer created a static Web project and imported all the resources.

Afterwards, the developer realizes that, in addition to static resources, there are dynamic resources such as JSP pages. What is the BEST way to correct the situation?

- A. Use the "Convert to a Dynamic Web project" option to convert the static project to a dynamic project.
- B. Create a dynamic Web project and move all the resources to the new project.
- C. Create a dynamic Web project and move only the dynamic resources to the new project
- D. Create a Java project and a dynamic Web project, then move the utility jars to the Java project and the dynamic resources to the dynamic web project.

Answer: A

3. A developer uses a singleton class in a Web application configuration parameters and system resources. The configuration parameters are frequently altered by the Web application components during runtime. Which of the following breakpoints is BEST suited to help the developer trace the value of such configuration parameters and determine how they are Getting altered?

- A. Java Exception
- B. Conditional
- C. Load
- D. Watch

Answer: D

4. A developer is debugging a problem and needs to display the value of a variable. However, the show details pane is displaying the class name and not the value. The developer needs to:

- A. Toggle the variables display from class to value.
- B. Check for a toString method for that class.
- C. Use the pop-up inspector to evaluate the reference.
- D. Change the type of the variable from reference to primitive.

Answer: B

5. After running the Code Review on a module a developer wants to find all of the problems, warnings and recommendations associated with a particular file. What are TWO approaches available to the developer?

- A. Exclude other files from the project by applying exclusion filters in Project properties -> Java Build Path->

Source.

- B. Select Code Review from the context menu for the file in the Package Explorer view.
- C. Select the file from the sort By Files list in the Code Review view.
- D. Select the Category from the Manage Rules page in the Code Review view.

Answer: B,C

6. A developer needs to use the same set of logs repeatedly with the Log and Trace Analyzer. The BEST way to do this is to:

- A. Use the default log set to import logs with the import wizard
- B. Correlate the log files using the Lo Correlation wizard.
- C. Customize the log using common base events in workbench preferences.
- D. Sort and filter the log records in the log view.

Answer: A

7. An application stops at a breakpoint in a main () method in com.package1.Class1.

Using only the "Step into" button, the debug editor shows com.package2.Class2.test1() but never returns to the main () method. What is the problem?

- A. There is a step filter set for com.package1.*
- B. There is a step filter set for both com.package1.* and com.package2.*.
- C. There is a step filter set for com.package2,* so the debugger cannot return the calling method.
- D. A step filter needs to be set on order to allow the debugger to open methods in the com.ibm package.

Answer: A

8. A JUnit test is run, and it is anticipated that there will be information in the JUnit view. Why is the view not visible?

- A. Preference to show the view when there is information to display is set=NO; errors in the execution =YES
- B. Preference to show the view when there is information to display is set=YES; errors in in the execution =YES
- C. Preference to show the view when there is information to display is set=NO; errors in the execution= NO;
- D. Preference to show the view when there is information to display is set=YES; errors in in the execution =YES

Answer: D

9. Which of the following statements is TRUE about setting up Java Project. The project can:

- A. Customize the JRE extension folder libraries in the target JVM.
- B. Have multiple source folders but only one output folder.
- C. Have multiple source folders and multiple output folders
- D. Generate class files for source files with compiler errors.

Answer: B

10. A developer did not generate sample JSPs that contain TestClient.jsp TO TEST THE Web services client implementation. How can the developer create sample JSPs alone without disturbing the contents that were already generated?

- A. Right click on any of the Java proxy classes, and select Generate Web Services from the context menu.
- B. Right click on any of the Java proxy classes, and select Generate sample JSPs from the context menu.
- C. Right click on WSDL file, and select Web services -> Generate sample JSPs from the context menu.
- D. Right click on web.xml, and Select Generate sample JSPs from the context menu.

Answer: B

11. What is the BEST approach to avoid repeated manual data field entry while testing a Web service with Web Services Explorer?

- A. Copy and paste the sequential data entries into a text file. Use the import Wizard to launch it in the Web Services Explorer.
- B. Use the Source link to save the data entries as a SOAP message. Use the Load link to restore the entries before each test.
- C. Set the filed values in the project's Web Services default Source preferences.
- D. Export an automation script from the service WSDL file. Enter the input filed values into the script and then use the import Wizard to execute it.

Answer: B

12. A developer create a Web service. The client side artifacts will be developed by a different team. What steps should a developer take to test the implementation quickly?

- A. Test the Web services using TCP/IP monitor
- B. Test the implementation using the WSDL file with the UDDI Explorer.
- C. Test the implementation using the WSDL file with the Web services Explorer.
- D. Test the implementation using the WSDL file with JUnit.

Answer: C

13. If a WSDL file requires another WSDL file that exists outside the workspace, which of the following actions should a developer take?

- A. Add a WSDL import element to the WSDL file using the WSDL editor.
- B. Import the WSDL file into the workspace and drag and drop it into the other WSDL file.
- C. Use the XML editor to import the WSDL file into the workspace.
- D. Merge both WSDL documents using the WSDL editor.

Answer: A

14. Which of the following is the BEST approach to provide client-side artifacts for an EJB?

- A. Export the EJB project as an EJB JAR.

- B. Export the EJB client project as an EJB JAR.
- C. Export the EJB project as a JAR.
- D. Export the EJB client project as Ajar.

Answer: D

15. The BEST way to remove an interface implementation from a session bean is to:

- A. Delete the files that implement that interface from the Navigator view.
- B. Open the Source tab of the EJB Deployment Descriptor and delete the references to this interfaces.
- C. Remove the BeanName from Bean-type tab of the EJB Deployment Descriptor.
- D. Remove the bean from the Bean tab of the EJB Deployment Descriptor and select Delete Deploy Code.

Answer: D

16. Which TWO of the following are techniques for creating Entity Beans from an existing database schema?

- A. Create a database connection from the Database Explorer view and copy the connection to an EJB project to generate Entity Beans.
- B. Create a database connection from the Database Explorer view and create Entity Beans for a table in a schema.
- C. Create an EJB to RDB bottom-up mapping inside an existing EJB project
- D. Create an Entity Bean using the new EJB wizard and specify a database schema when defining the Entity Bean.

Answer: B,C

17. A developer is re-writing a legacy relational database application using J2EE technologies. The developer has already implemented the CMP EJBs. The BEST way to create the mapping is to use:

- A. Top-down mapping
- B. Bottom-up mapping
- C. Meet-in-the-middle mapping
- D. Custom mapping

Answer: C

18. A developer wants to create a session bean that inherits from another session bean.

Which of the following can the developer do?

- A. Create the child session bean. Then create the parent session bean, making it the supertype of the child.
- B. Create both session beans from the create an Enterprise Bean wizard. Then bring up the Properties dialog of the child session bean and select the parent.
- C. Create both session beans from the Create an Enterprise Bean wizard. Then specify the parent of the child session bean in the deployment descriptor.
- D. Create the parent session bean. Then create the child session bean, specifying the parent session bean.

Answer: D

19. Using the Universal Test Client, a developer can test which of the following?

- A. JSPs
- B. EJBs
- C. JavaBeans
- D. Servlets

Answer: B

20. Developers can specify the workspace they want to use by doing which TWO of the following?

- A. Select a specific workspace directory while launching the application
- B. Open a command prompt, navigate to the workspace directory and launch the application
- C. Change the default workspace directory in the preferences
- D. Use the -data argument when launching the application.

Answer: A,D

Visualexams.com was founded in 2006. The safer,easier way to help you pass any IT Certification exams . We provide high quality IT Certification exams practice questions and answers(Q&A). Especially Adobe, Apple, Citrix, Comptia, EMC, HP, HuaWei, LPI, Nortel, Oracle, SUN, Vmware and so on. And help you pass any IT Certification exams at the first try.
