

Exam : IBM 000-297

**Title : Test297,ibm websphere mq
v5.3 solution development**

Version : Demo

Important Note, Please Read Carefully

Other VisualExams products

[All visual exams IT Exam Products](#)

Our products of Offline Testing Engine

Use the offline Testing engine product to practice the questions in an exam environment.

Build a foundation of knowledge which will be useful also after passing the exam.

[visual exams Testing Engine](#)

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at VisualExams and update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to <http://www.visual exams.com/>
2. Log in the **User Center**
3. The latest versions of all purchased products are downloadable from here. Just click the links.

Feedback

If you spot a possible improvement then please let us know. We always interested in improving product quality.

Feedback should be send to Visual exams@hotmail.com. You should include the following: Exam number, version, page number, question number, and your login Account.

Our experts will answer your mail promptly.

Explanations

This product does not include explanations at the moment. If you are interested in providing explanations for this exam, please contact Visual exams@hotmail.com.

Features

- Comprehensive questions with complete details
- Instant Downloadable in PDF form.
- Verified Answers Researched by Industry Experts
- Questions accompanied by exhibits.
- Drag and Drop questions as experienced in the Actual Exams.
- These questions and answers are backed by our GUARANTEE.
- Questions updated on regular basis.
- Like actual certification exams our product is in multiple-choice questions (MCQs)

Commitment to Your Success: At VisualTestExam.com, we are committed to you ongoing success. Our exams and questions are constantly being updated and compared to industry standards.

Want to earn a Microsoft certification like MCSE, MCSE 2003, CCNA, CCNP? Thinking about getting an A+ or CCSP?

A, CCSP or Network+ Certification with less effort and time. You will be astonished at the theoretical and practical knowledge you will acquire in such a short period of time using our Certification Training Products. Our Study material will enable you to pass your Microsoft, Your Cisco and any other certification on the very first attempt.

Guarantee

Visualexams provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if somehow you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

1. Which of the following C language data types are NOT directly supported by the WebSphere MQ data conversion exit generation facility?

- A. char
- B. float
- C. long
- D. short
- E. double

Answer: BE

2. Which of the following JMS objects can be defined using the WebSphere MQ JMS Admin tool?

- A. MQJNDIConnectionFactory
- B. MQQueue
- C. MQTopic
- D. MQXAQueueConnectionFactory
- E. JMSWrapMQQueue
- F. MQCOSConnectionFactory

Answer: BCD

3. Which of the following is NOT true regarding WebSphere MQ API Exits?

- A. API Exits run on z/OS.
- B. API Exits must be written in C.
- C. API Exits are called before and after each MQI verb.
- D. MQI calls can be made within an API Exit.

Answer: A

4. Which of the following conditions can cause a WebSphere MQ event message to be generated?

- A. MQPUT call fails because the queue is inhibited for put.
- B. MQINQ call is performed to get the current queue depth.
- C. MQGET fails because the queue is not open for input.
- D. MQPUT fails because the message is too big for the queue.
- E. MQPUT causes the queue to become full.

Answer: AE

5. An application running on WebSphere MQ for Linux has a requirement to collect a list of all queues on its local queue manager. Which of the following verbs is used to send the request using the MQAI?

- A. MQSendPCF
- B. MQExecute
- C. MQINQ
- D. MQSendAI

Answer: B

6. When using WebSphere MQ with Microsoft Transaction Server (MTS), which of the following is NOT true?

- A. WebSphere MQ can work in the Microsoft Transaction Server (MTS) environment, and MQI connection handles can be pooled for efficiency.
- B. WebSphere MQ can work in the Microsoft Transaction Server (MTS) environment, but only supports a single phase commit by Microsoft DTC.
- C. Handles in the pool will only be re-allocated to a client with the same user id.
- D. A Microsoft Transaction Server (MTS) application which calls WebSphere MQ can also run under Microsoft COM+ unchanged.

Answer: B

7. Which of the following statements about programming languages supported by WebSphere MQ is true?

- A. WebSphere MQ applications cannot be written in Visual Basic.
- B. On Compaq NSK, WebSphere MQ applications must be written in TAL.
- C. On iSeries, RPG programmers cannot use WebSphere MQ facilities.
- D. COBOL can be used to program WebSphere MQ applications on Windows 2000.

Answer: D

8. In a new application to be created on WebSphere MQ for z/OS V5.3, which of the following design criteria will be inconsistent with the use of queue-sharing groups?

- A. All messages are between 16K and 32K in length.
- B. The queues must contain persistent and non-persistent messages.
- C. Reply queues must be temporary dynamic queues.
- D. Each message depends on the contents of the previous one.
- E. The SYSTEM.DEFAULT.LOCAL.QUEUE must be redefined as shared.

Answer: CD

9. A WebSphere MQ for Linux for Intel application exchanges large XML messages with a WebSphere MQ for Sun Solaris application. To send these messages using message segmentation, which of the following MUST the sending application perform?

- A. Issue the MQPUT with MQMF_GROUPING_ALLOWED set in the MsgFlags of the message descriptor.
- B. Issue the MQPUT with MQMF_SEGMENTATION_ALLOWED set in the MsgFlags of the message descriptor.
- C. Issue the MQPUT with MQPMO_NO_SYNCPOINT in the put message options.
- D. This cannot be performed by the sending application.

Answer: B

10. A solution design requires that JPEG binary images up to five megabytes in length be distributed by

applications running on several platforms. Which of the following is in conflict with this design requirement?

- A. MQSeries for Compaq NonStop Kernel
- B. MQSeries for OS/2 Warp
- C. WebSphere MQ for Linux for zSeries
- D. WebSphere MQ for Windows

Answer: A

11. A central UNIX application is being developed to provide responses to requests from users located at branch offices. Each branch office has its own request queue on the central UNIX server. There are 20 branch offices. The central UNIX application runs as a single process using a separate thread for each request queue. Which of the following statements is true about the implementation of each thread?

- A. The connection handle can be shared by using MQCONN to connect to the queue manager.
- B. Threads cannot connect to the queue manager by using MQCONN.
- C. The WebSphere MQ implementation is not dependent on the POSIX thread level.
- D. MQCMIT calls must be issued by the parent thread.

Answer: A

12. In the design of a suite of WebSphere MQ message applications to be run on multiple machines, when is data conversion LEAST likely to be needed?

- A. When the solution will be deployed in a single country
- B. When the applications will use existing channels and the MQMD Format specifies MQFMT_STRING
- C. When the messages are being sent between two applications on the same system
- D. When a web browser is front-ending the WebSphere MQ applications

Answer: C

13. Which of the following MQI calls is used to start a Queue Manager coordinated global unit of work?

- A. MQSTART
- B. MQSTRTP
- C. MQBEGIN
- D. MQSTTRAN

Answer: C

14. A WebSphere MQ application A sends a message to WebSphere MQ application B using the following settings: mqput: syncpoint, non-persistent, expiry =10 seconds, format=MQFMT_STRING Application A then waits for the reply message from application B using the following settings: mqget: syncpoint, wait interval =10 seconds, any CorrelId Any messages received which do not correspond with the outstanding request are discarded. On receipt of the expected reply, application A commits its messaging work. If the average length of time that application B takes to process the request is five seconds, which of the following behaviors will application A exhibit?

- A. Reply messages will never be received.
- B. Reply messages will occasionally fail to be received.
- C. Messages will occasionally be received in the wrong code page.
- D. Application A may occasionally cause performance problems in the application B.

Answer: A

15. Which of the following statements describes the behavior of WebSphere MQ when a message arrives that is larger than the buffer specified by the application on the MQGET call if the application specified MQGMO_ACCEPT_TRUNCATED_MSG?

- A. The message is not removed from the queue. WebSphere MQ terminates the application abnormally and writes a message to the system operator.
- B. The message is removed from the queue and is copied in its entirety to the application's buffer. WebSphere MQ returns to the application with a completion code of MQCC_WARNING to warn the application that it may have written past the end of its buffer. The reason is set to MQRC_TRUNCATED_MSG_ACCEPTED.
- C. The message is removed from the queue, and as much of it is copied to the application's buffer as will fit. WebSphere MQ returns to the application with a completion code of MQCC_WARNING and a reason of MQRC_TRUNCATED_MSG_ACCEPTED.
- D. The message is not removed from the queue, but as much of it is copied to the application's buffer as will fit. WebSphere MQ returns to the application with a return code of MQCC_WARNING and a reason of MQRC_TRUNCATED_MSG_FAILED.

Answer: C

16. Which of the following WebSphere MQ manuals describes the WebSphere MQ sample programs?

- A. Application Programming Guide
- B. Planning Guide
- C. Application Programming Reference
- D. System Administration Guide

Answer: A

17. The following C statement performs a WebSphere MQ operation: MQPUT1(Hcon, &odR, &md, &pmo, buflen, buffer, &CompCode, &Reason) Which of the following statements is true?

- A. Hcon contains the name of the queue manager.
- B. The structure for the variable md is contained in the cmqmsg.h header file.
- C. The buflen variable specifies how many bytes from the buffer variable are to be sent in the message.
- D. This call is suitable for use in applications that send many messages to the same queue.

Answer: C

18. In which of the following languages can a cluster workload exit be written?

- A. COBOL
- B. C
- C. PL/1
- D. System/390 ?assembler (WebSphere MQ for z/OS)
- E. RPG

Answer: BD

19. Which of the following steps are required to enable an application to be triggered?

- A. Define appropriate trigger attributes for the triggered queue.
- B. Define a Process object which specifies the application to be triggered.
- C. Define the application to be triggered.
- D. Start the appropriate trigger server.
- E. Start the appropriate trigger monitor.
- F. Modify the trigger monitor to activate this application.

Answer: ABE

Visualexams.com was founded in 2006. The safer,easier way to help you pass any IT Certification exams . We provide high quality IT Certification exams practice questions and answers(Q&A). Especially Adobe, Apple, Citrix, Comptia, EMC, HP, HuaWei, LPI, Nortel, Oracle, SUN, Vmware and so on. And help you pass any IT Certification exams at the first try.
