1. A Veritas NetBackup 6.5 environment uses a multi-tiered architecture.

Which system functions as the first tier?

- A. Media Server
- B. NetBackup Operations Manager (NOM) Server
- C. Enterprise Client
- D. Master Server

Answer: D

2. Where can you find and access a full list of Veritas NetBackup 6.5 product documentation?

- A. under the Help tab in any window of the NetBackup NOM console
- B. in the Help (Windows) or hlp (UNIX/Linux) directories on the Master Server
- C. online on the Symantec Corporation Support website
- D. on any host that has NetBackup component(s) loaded, through the global Help function

Answer: C

3. A Veritas NetBackup 6.5 client system requests a user-initiated backup by sending a request to port 13720 of the configured Master Server system.

Which Veritas NetBackup service or process receives this request?

- A. bpdbrm
- B. bprd
- C. nbpem
- D. nbjm

Answer: B

4. The customer runs the Images on Media report to obtain a list of backup images that are on the tape volume XYZ001.

Which NetBackup Master Server service/process maintains the catalog from which this report is derived?

- A. NetBackup Jobs Database Manager
- B. NetBackup Service Layer

- C. NetBackup Job Manager
- D. NetBackup Database Manager

Answer: D

5. In a customer's Veritas NetBackup 6.5 environment, the Master Server is host A, the Enterprise Media Manager (EMM) Server is host B, the only configured Media Server is host C, and Client systems are host D through host Z. The customer has encountered a problem performing a standard restore operation of host D from the tape on which the backup was written and was directed by Symantec support to enable debug logging for the bpbm process.

On which Veritas NetBackup 6.5 system would this debug log be enabled?

- A. NetBackup Master Server (host A)
- B. NetBackup EMM (host B)
- C. NetBackup Media Server (host C)
- D. NetBackup Client (host D)

Answer: C

6. The backup of a client is not running at the expected time, based upon a specific backup policy and schedule.

Which Veritas NetBackup 6.5 service/process is responsible for the worklist that contains the entry for this job and for the initiation of the job, based upon the 'due' time of the job?

- A. NetBackup Policy Execution Manager
- B. NetBackup Job Manager
- C. NetBackup Jobs Database Manager
- D. NetBackup Backup and Restore Manager

Answer: A

7. The backup of a particular client system fails with a status code 49 - 'Client did not start'.

For which process do you need to create and check the debug log?

- A. bptm
- B. bprd

- C. bpbkar
- D. bpdbrm

Answer: C

8. Which two statements are true about the PBX communication facility used in Veritas NetBackup?
(Select two.)

- A. PBX is used when legacy (pre-6.x) processes need to communicate with new (6.x) NetBackup processes.
- B. PBX is used for all tape library command streams in NetBackup 6.5 and above.
- C. PBX is used for NetBackup 6.0 and above for all interprocess communication.
- D. PBX is used for all disk array snapshot facility command streams in NetBackup 6.5 and above.

Answer: AC

9. What is the purpose of the nbproxy process?

- A. It facilitates communication between the Master Server and the client.
- B. It provides communication between multi-threaded processes and PBX.
- C. It facilitates communication between the Master Server and the Media Server.
- D. It provides communication between multi-threaded processes and single-threaded processes.

Answer: D

10. The nbproxy process communicates and queries which Veritas NetBackup 6.5 component?

- A. Enterprise Media Manager
- B. Database Manager
- C. Robotic Control Service
- D. Automatic Volume Recognition daemon

Answer: B
